

Ballinasloe Composting and Recycling Scheme

Sinéad Ní Mhainnín Galway County Council 5th February, 2004

Public Private Partnership

The BCRS has been implemented through a partnership between:

- Galway County Council
- Ballinasloe Town Council
- Wheel a − Bin / Barna Waste
- Residents

Assign Responsibilities

Galway County Council

- Awareness campaign
- Composting facility
- Management and monitoring

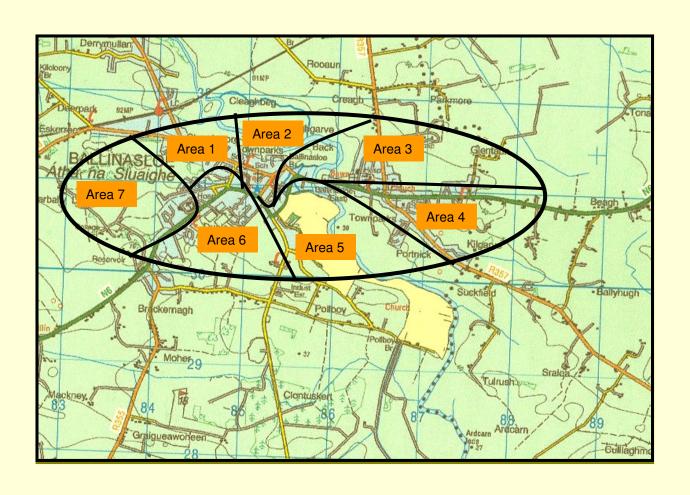

• Wheel - a - Bin / Barna Waste

- Purchase and distribution of bins and bags
- Collection of segregated waste

Ballinasloe Town Council

Providing location

Ballinasloe Area

Proposed Scheme

• 1,500 households in the Ballinasloe Area:

- 2 wheelie bins per household
 - 1 organics
 - 1 landfill waste
- clear plastic bags
 - cardboard
 - paper
 - plastic

New Collection Service

Organic Bin

Collected every second week

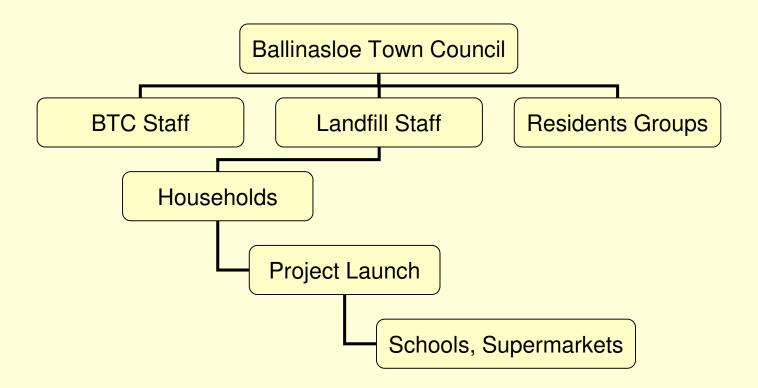

Recycle Bags

Collected every second week (same day as the organic bin collection)

Landfill Bin

Collected every second alternate week

Awareness Process

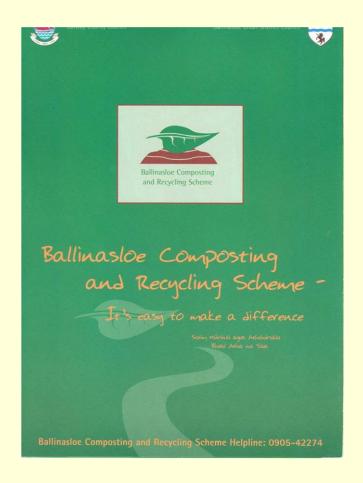

Documentation

• A4 Information Brochure

• A5 Information Brochure

• A5 Calendar

Information Leaflets

Kitchen Waste

Household Awareness Campaign

- 1500 households
- 7 areas / 4 teams
- estimated number of households in each area and set a timeframe
- door to door 30 households pn/pt

Completed during November-December 2001

Information

- Project Launch
 - Invited members of all residents committee
 - Elected representatives
 - Council officials
 - Open invitation to anyone else

Information

- Supermarket Campaign
 - Samples of what went into each bin
- Schools
 - Awareness days on the new waste collection scheme
- General Public Awareness Campaign
 - local radio
 - local newspaper

Difficulties - Doorstep

- Collection changed to bi-weekly collection
 - no weekly landfill collection
- Resistance to another waste initiative in the Ballinasloe Area
- Some areas were particularly difficult to deal with
 - various estates, apartments (transient population)

Difficulties – Collection

Bin Contamination

- Bright red stickers were attached to contaminated bins by drivers
- Council staff followed trucks on the various routes to talk to householders / leave further information
- Following a period of grace contaminated bins were not collected

Composting Process

In-Vessel System:

- compost is contained which eliminates odours and leachate
- computer controlled system
- produces a high quality product

Composting Process

organic matter mixed with woodchip

loaded into the in-vessel container

air passes through bio-filter

temperature controlled by computer system

Timeframe

- 14 days in-vessel container
- Curing pad for 8-10 weeks
- Compost is screened
- Tested by Bord na Móna
- High quality compost ready for market

Initial Costings

Initial cost covered by Galway County Council

• Capital Costs €300,000

• Public Awareness € 25,000

• Annual Operating Costs
€ 44,000

Cost to the Householder

• No increase other that the standard annual increase from waste contractor

Compost Use

• Compost was made available to householders participating in the scheme

• Used as a surface mulch on flower beds in public area

Positive Note

- the scheme is very successful with approx. 500 tonnes of organics being composted per annum
- low contamination rates
- public have embraced scheme
- reduction in organics going to landfill

Conclusion

- Private Waste Contractors
 - Intend to provide the County with organic waste collection service during 2004
 - Environment Section of Galway County Council will attend public meetings with the various contractors to promote the segregated collection of organics
